

# **markilux** by Aquarius Blinds

## **markilux pergola 210 / pergola 210 tracfix**

**round, square, functional –**

**protection from the sun and inclement weather for large areas**

The markilux 8800 conservatory awning system with slender support posts,  
can be lowered on one side – optionally with tracfix system

**rated to wind resistance class 3  
(corresponds to Beaufort 6)**

end cap and guide track

single unit with lowered support post (dimensions in cm)

the post can be lowered by between 20 cm and 40 cm: winch handle operation of the markilux pergola 210

when fully extended the rounded front profile sits flush with the end of the guide tracks, giving the system a completely homogeneous appearance

coupled unit – up to 3 fields are available (only on request)

closed appearance thanks to the tracfix system – the tracfix system does away with the annoying gap between the cover and the guide track

coupled unit with lowered support posts (dimensions in cm)

## Design Features

the cassette profile, the guide tracks, the front profile and the front support posts complement one another perfectly and result in a large but nevertheless very elegant patio shading system

large scale awning system resting on slender posts with unobtrusive lateral guide tracks

for long-lasting attractiveness the awning is powder coated in the standard colours traffic white, metallic aluminium, grey brown or anthracite metallic

when fully extended the rounded front profile sits flush with the end of the guide tracks, giving the system a completely homogeneous appearance

## Technical Specification

manual height adjustment possible on one side – to ensure water drainage at a minimum installation pitch of 7°; if the pitch is at least 14° water drainage can be guaranteed even if the support post is not lowered

vertical, manual adjustment of the support post by between 20 cm and 40 cm (depends on the awning size) by means of winch handle-operated gearbox inside the post

standard height of the front support posts 250 cm, other heights (from 152 cm to 250 cm) on request

## Optional Accessories

coupled units up to 3 fields wide are available in the markilux pergola 210 (only on request)

vertical solar protection and more privacy is optionally available with the 230 cm high shadeplus / drop valance

radio-controlled motor with markilux remote control – ergonomically shaped

polyester powder coating in non-standard colours is available to individual order (prices on request, longer lead time)

wall sealing profile to cover the gap between awning and wall; effective up to an awning pitch of 25°

closed appearance thanks to tracfix system (optional) without the annoying gap between the cover and the guide track

## Frame colours

**traffic white**

RAL 9016

**metallic aluminium**

RAL 9006

**grey brown, similar to**

RAL 8019

**anthracite metallic**

5204

Colours similar to those in the RAL chart. Colours may differ slightly from those depicted in both hue and finish.

## Dimensions and configuration options

single unit 1 field, 1 motor

3 fields	—	<input checked="" type="checkbox"/>

 = tracfix

MA = awning fixture width  
M = overall awning width

H = extension  
HT = no. of brackets

## Frame colours

		standard	optional
traffic white	RAL 9016		
metallic aluminium	RAL 9006		
grey brown, similar to	RAL 8019		
light ivory	RAL 1015		
anthracite metallic	5204		
stone grey metallic	5215		
off-white textured finish	5233		
Havanna brown textured finish	5229		
non-standard powder-coated finish			

## Miscellaneous

	standard	optional
<b>shadeplus / drop valance</b>	—	<input checked="" type="checkbox"/> <sup>1)</sup>
<b>wall sealing profile</b>	—	<input checked="" type="checkbox"/> <sup>2)</sup>
<b>tracfix</b>	—	<input checked="" type="checkbox"/>
<b>light and wind sensor</b>	—	<input checked="" type="checkbox"/>

1) **N.B!** Only use the shadeplus / drop valance when the telescopic post has been returned to its raised position!  
Shadeplus height 230 cm

2) possible up to a maximum awning pitch of 15°

Holes have been punched in the internal gutter area of the front profile at regular intervals to improve the water drainage from the front profile. This may lead to very slight indentations in the front profile at those points; as these are unavoidable, they do not form the basis for complaint.

Colours similar to those in the RAL chart. Colours may differ slightly from those depicted in both hue and finish.

## Additional information

The width of the awning cover is always **less** than that of the awning.

**Pitch adjustment range:** from 5° to 45° (to the horizontal).

**Water drainage** can only be guaranteed at a **minimum awning pitch of 14°** to the horizontal. If the markilux pergola is to be used as rain protection and the pitch is less than 14°, water drainage can be guaranteed by lowering the telescopic post of the awning. The pitch on installation must, however, be at least 7°.

**Definition of fixture width/order width:** The fixture width is the measurement centre to centre from guide track to guide track. The overall width of the cassette is 100 mm greater than the fixture width of the awning. The fixture width tolerance is + 0 mm / - 20 mm.

**Definition of the extension / order extension:** The extension is measured with the awning extended from the back of the cassette to the leading edge of the front profile. The tolerance in the extension is +40 mm / - 40 mm.

**Definition of operating side:** the operating side is always given as if standing in front of the awning (right or left).

**Installation dimensions:** The same installation dimensions are valid for both the pergola 210 and the pergola 110 (therefore please consult the page „Installation dimensions“ pergola 110)

**N.B!** In the case of **continuous motor usage**, the motor may stop after 3 to 4 minutes to prevent overheating.

**N.B.!** In contrast to standard motors, radio-controlled motors have no safety cut-out mechanism if the front profile is obstructed. If this function is required in combination with radio-controlled operation, order the hard-wired motor with an external radio receiver and an appropriate transmitter.

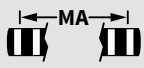

**N.B.!** In the case of a bank of awnings operating simultaneously, the same speed of rotation of the motors cannot be guaranteed because of the internal tolerances of the motors.

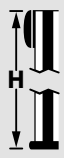

**N.B.!** Before extending or retracting the markilux pergola 210, please make sure that the telescopic post has been returned to its raised position!

**The rate of extension** of a single unit with hard-wired motor is approximately **11 seconds per metre**.

	551–600	30	30	40	40	40	40	—	—

dimensions in cm

Adjustment range of the support post:  = 20 cm  = 30 cm  = 40 cm

**MA** = awning fixture width

**H** = extension

## Additional Information

**Coupled pergolas** are available up to a max. width of **2 single units** (2 fields) sided by side. 3 single units adjacent to one another on request.

In the case of coupled units with 2 or 3 fields and 2 motors, **unequal running speeds** due to tolerances within the motors may occur.

In the case of **coupled units** with **fields of differing sizes** smooth rolling-up behaviour of the covers cannot be guaranteed. This has no bearing on the functionality or the durability of either the cover or the pergola itself.

The matrices above assume equal field widths in coupled awnings.

In the case of coupled units up to **a fixture width of 700 cm the cassette** will be supplied **in one piece**. If, for reasons of transportation or fixture, the cassette needs to be split, please note this explicitly when ordering.

The rate of extension of coupled units with **2 fields, 1 Motor and 3 fields, 2 motors** is approximately **16 to 18 seconds per metre**. In the case of coupled units with **2 fields, 2 motors** extension takes as long as with single awnings i.e. approximately **12 to 14 seconds per metre**.

In the case of **2 motors**, the individual motors can be operated independently of one another.

Maximum awning size: please refer to the table for single units! Please also refer to the matrix for single units for the dimensions possible with the **tracfix system**.

If coupled pergolas are fitted into a **recess** or **reveal** the overall width of the coupled awning must be at least 6 cm less than the width of the opening to allow the pergola to be coupled.
